FOUNDER QA · PRODUCTION

Things to check on claimsaverplus.com

Use this after the admin-console deploy. Work top to bottom. Tick a box only when you saw the behavior yourself. Do not test on a real paying claimant if a throwaway account will do.

One production env to set in Vercel (Settings → Environment Variables → Production): **CRON_SECRET** — a long random string. The daily retention job at 11:00 UTC (`GET /api/cron/retention`) will 401 until this exists. Optional: **RETENTION_YEARS** (defaults to 7; counsel still confirms). **OWNER_SEED_EMAIL** is already support@claimsaverplus.com.

0. Ground rules while you click

- Staff manage the **software**, not a filing. You are never the filer from /admin or /clinic.
- Do not open a claimant worksheet, notes, documents, or medical details from a staff surface. Those pages should not exist in the console.
- Florida statute **discusses** a 14-day window. Do not talk as if you are giving legal advice.
- Search users by **exact email or user ID** only. Names and partial matches are blocked on purpose.
- Do not schedule deletion, impersonation, or role changes on a real customer unless you mean it.

1. Public website · www.claimsaverplus.com

1. Home: “File Your Florida No-Fault Claim. Keep What's Yours.” Flat $500. You stay the filer. Not a law firm. English / Spanish / French in the header.
1. Scroll to “Florida is a no-fault state. The paperwork still isn't.” Confirm Option one (file it yourself) and Option two (hire a PI firm) — not a third option where ClaimSaver+ files for them.
1. **/how-it-works** — PIP in 5 steps. Copy says you handle every step.
1. **/pricing** — Guided Claim Platform $500.00. Terms + Privacy clickwrap before Continue.
1. **/who-we-are** — family story. Still self-help software, not a firm.
1. **/when-to-call-an-attorney** — still live; we do not hide the “get a lawyer” path.
1. 14-day banner on public pages (not on /14days itself). Dismiss it; it should stay gone on refresh.

2. 14 DAYS. campaign · already on production

1. **/14days** — giant “14 DAYS.” hero. Subline: hurt in a crash in Florida / medical care / PIP benefits. CTA “Get the free checklist.”
1. Language toggle EN | ES | FR. Open **/es/14dias** (“14 DÍAS.”) and **/fr/14jours** (“14 JOURS.”).
1. Cards: 14 days to get treated · insurer may require exams · PIP doesn't cover everything. Statute language, not advice.
1. Submit the form with a throwaway email you control. Honeypot field named website must stay empty. You should land on **/14days/thanks** and get mail from ClaimSaver+ with the PDF (needs RESEND_API_KEY on Vercel — already used for the live campaign).
1. Download the checklist PDF. Confirm it is a self-help list, not a filing, and that the disclaimer is on the thanks page.
1. Do not enter crash details, medical info, or a policy number — the form must not ask for them.

3. Sign in as OWNER and enroll MFA

Use **support@claimsaverplus.com** (the seeded OWNER). Password is the one you already set for that mailbox — it is not in this PDF.

1. Go to **https://www.claimsaverplus.com/login?next=/admin**.
1. First time: you are sent to **/admin/mfa**. Scan the QR in Authy / Google Authenticator / 1Password. Enter the 6-digit code. Staff access is aal2 (authenticator), not password-only.
1. Idle timeout is 30 minutes. Absolute session is 12 hours. After either, you must enter a fresh code. Sidebar shows remaining idle time.
1. If MFA ever loops, sign out, sign back in, then open /admin/mfa again before visiting /admin.

4. Admin console · /admin (this deploy)

Overview

1. Header: “Staff manage the software, not a claimant's filing.” Email is masked (s***@…). Role OWNER.
1. Counts: Accounts, Claim records (count only), Open tickets, Pending deletions, 14-day leads, Clinics, Staff seats.
1. Yellow “Prohibited in this console” list is visible. System health: database connected, last audit event, messaging footer, retention years.

Clinics / BAA · /admin/clinics

1. Open **Palm Grove Rehab LLC** (test pilot). BAA should read SIGNED and enrollment open — or set BAA to SIGNED, tick active, save.
1. Try the inverse once: BAA not signed + active/open. Save should fail. Enrollment cannot go live without a signed BAA.
1. Copy the enrollment URL from the clinic page. In a private window, sign in as a **test claimant** and open that /enroll/[code] link. Confirm the page says you remain the filer and the worksheet is not sent to the clinic. Enroll. Back on the clinic page, you should see checklist **progress** (step / status) only — no worksheet JSON, no documents, no medical details.
1. Invite a clinic admin only if you have a throwaway email. They land on **/clinic**, not /admin.

Users, reveal, impersonation · /admin/users

1 Search a test claimant by **exact email**. Partial names should return nothing useful.
1 Open the user. Email / phone / name stay masked until you pick a reveal reason (billing dispute, lockout, legal request, other) and click reveal. That writes an audit row with the reason, not the secret.
1 Confirm you see claim **record count**, purchases, consents, tickets — not the worksheet body.
1 **Impersonation (two browsers):** On the user page, “Ask claimant to approve a 30-minute view.” Needs a ticket + reason + a fresh TOTP code. In the claimant browser, dashboard shows an amber banner: Support asked to view your account; they cannot change your filing. Click Allow. Back in admin, the session is 30 minutes and **read-only**. Try a POST (save a form) — it should 403. End the session from admin. Silent impersonation is not a button.

Support tickets · /admin/support

1 Open a ticket. Banner: do not advise on a PIP claim. Replies email the claimant with an account/billing/technical footer. You remain the filer.
1 If someone writes a claim-substance question, use the built-in macro (I can't advise…). Confirm the email actually arrives.

Privacy, audit, roles, system

1 **/admin/privacy** — schedule deletion only on a throwaway. Account disables now; hard-delete is 30 days later. Cancel if you do not want it to fire.
1 As the same throwaway claimant, dashboard “Download my data” should produce JSON. Staff must not be able to download that payload from the console.
1 **/admin/audit** — reveal, impersonation request, ticket reply, BAA change should appear. No worksheet contents in the log.
1 **/admin/roles** — OWNER only. Do not promote a random user. Never self-promote from the UI (seed is scripts/seed-owner.ts only).
1 **/admin/system** — retention years, cron note, emergency revoke. Do not click revoke unless you intend to lock the console.
1 **/admin/pilots** — Palm Grove listed as PILOT if that flag is on.

5. Claimant product (spot-check only)

1 Sign in as a test claimant with platform access. Dashboard, worksheet, vault, calendar still work. Admin work should not have changed those flows except the support-access banner and the optional data export.
1 Paywall still holds on an unpaid test account.
1 You stay the filer on every surface.

6. What must never appear

- No staff page that opens worksheet JSON, uploads, or medical details.
- No “assign this claimant to a clinic” broker control. Enrollment is claimant-initiated.
- No silent view of a dashboard. No bulk personal-data export for staff.
- Google should not index /admin, /clinic, or /enroll (robots.txt + noindex header).
- Do not share data with BLACKLINE or sister companies from this console.

7. Counsel still owns these

- BAA template and the SIGNED workflow (we store status; counsel confirms the agreement).
- Retention years (default 7) and FIPA / HIPAA-as-if handling.
- 14-day checklist copy and the “statute discusses” framing before ads spend.
- Breach timelines in docs/incident-response.md.

8. Shareable films (local, not the website)

These live on your laptop under `demo/film/`. They were not deployed.

- **claimsaver-plus-website.mp4** — 1:13 public site film.
- **claimsaver-plus-14days.mp4** — 0:55 campaign film.
- **claimsaver-plus-admin-console.mp4** — 1:21 console film (new voice).

Quick URL list

Surface	URL
Home	https://www.claimsaverplus.com/
14 DAYS.	https://www.claimsaverplus.com/14days
14 DÍAS.	https://www.claimsaverplus.com/es/14dias
14 JOURS.	https://www.claimsaverplus.com/fr/14jours
Admin	https://www.claimsaverplus.com/admin
Clinic	https://www.claimsaverplus.com/clinic
How it works	https://www.claimsaverplus.com/how-it-works
Pricing	https://www.claimsaverplus.com/pricing

If something fails, note the URL, the account (OWNER vs claimant vs clinic), and whether a worksheet was visible. Worksheet visible on a staff page is a stop-ship.
